

FEATURES & WHAT THEY MEAN FOR YOU

Everything your transformation produces, *on one living record.*

Findings, owners, decisions, tests and caveats stop living in decks and inboxes. Atlas holds them in one record that stays current, shows its evidence, and answers to leadership on demand.

BUILD THE RECORD

Data mapping & configuration process map

SOURCE → CANONICAL → RULES

Every source field, mapping and configuration step is captured as a living process map. **Your team stops re-deriving how the data flows on every engagement**, and new joiners see the whole picture on day one.

Process intelligence findings

BLOCKER · HIGH · FLAG

Atlas reads the client's real records and processes and surfaces what will break, graded by severity. **You walk into every conversation with evidence, not opinions from workshops.**

Requirement owners

A NAME ON EVERY GAP

Every requirement and finding carries a named owner and a required fix. **Nothing waits in a queue nobody watches, and the blame game after go-live never starts.**

PROVE IT

Test cases, generated from requirements

READY FOR UAT DAY ONE

Each validated requirement arrives with its test scenarios attached. **UAT stops being the place where missing requirements are discovered.**

Caveats, recorded where they apply

KNOWN LIMITS, VISIBLE

Assumptions and known limits sit next to the finding they qualify, not buried in an email. **Nobody builds on a caveat they never saw.**

Decision register

WHO · WHY · WHEN

Every promotion is stamped with the person and the rationale. **Six months later you know exactly why the mapping is what it is, even if the person who decided has moved on.**

RUN THE PROGRAM

Cross-program dashboard

ONE CLIENT, EVERY WORKSTREAM

E-invoicing, ERP and tax-engine workstreams for the same client on one screen. **You see where the whole transformation stands without chasing five status decks.**

Leadership & manager reporting, on demand

STATUS WITHOUT THE SCRAMBLE

Board-level summary or manager-level detail generated from the live record. **The Friday reporting scramble disappears, and the numbers always reconcile because there is one source.**

STAY CURRENT & DEFENSIBLE

AI-native regulation feed

RULE CHANGE → NOTIFICATION

Regulatory changes flow into your requirements automatically; anything affected triggers a notification to its owner. **A rule change becomes a task list, not a surprise in production.**

Full lineage on findings, decisions & caveats

EVIDENCE → FINDING → FIX

Every item traces back to the source record and rule it came from. **When anyone asks "why does this say that?", the answer is one click, not an archaeology project.**

AI audit from the document

ASK THE RECORD

Auditors and reviewers query the record directly and get answers with the evidence attached. **Audit prep shrinks from weeks of document hunting to a working session.**

The pattern behind every feature: the work your transformation already produces becomes a record instead of a pile of documents. The record stays current when things change, shows its evidence when challenged, and compounds from one program to the next.
