

Everything your transformation produces, *on one living record.*

1 BUILD THE RECORD

Data mapping & config process map

Never re-derive how the data flows.

Process intelligence findings

Evidence, not workshop opinions.

Requirement owners

A name on every gap. No blame game.

2 PROVE IT

Test cases from requirements

UAT stops finding what discovery missed.

Caveats, recorded where they apply

Nobody builds on a limit they never saw.

Decision register

Who decided, why, and when. Forever.

3 RUN THE PROGRAM

Cross-program dashboard

Every workstream, one screen.

Leadership & manager reporting, on demand

Board summary or team detail from the live record. The Friday scramble disappears.

4 STAY CURRENT & DEFENSIBLE

AI-native regulation feed

Rule changes trigger owner alerts.

Full lineage on every item

Evidence to finding to fix, one click.

AI audit from the document

Audit prep: weeks to a working session.

Documents die. *The record compounds.*

It stays current when things change, shows its evidence when challenged, and compounds into the next program.
